Tips for Using the Ion Hair Color Chart Effectively

1. Assess Your Starting Color

Before choosing a shade, evaluate your current hair color and condition. This helps in selecting a shade that will produce the desired result.

1. Consider Skin Tone and Personal Style

Match your skin undertone with the hair color:

1. Cool skin tones often suit ash or platinum shades.
2. Warm skin tones look great with golden or caramel hues.
3. Neutral undertones are versatile and can wear a broad spectrum.

1. Use the Chart as a Reference, Not a Guarantee

While the chart is informative, actual results may vary due to hair condition, porosity, and application technique. Always perform strand tests before full application.

1. Incorporate Toners and Glosses

To fine-tune shades and neutralize unwanted undertones, use ion toners or glosses post-coloring.

1. Maintain Color Longevity

Use color-safe shampoos and conditioners, and limit exposure to harsh elements to prolong vibrancy.

Deciphering the Ion Hair Color Chart: How to Read and Use It

Understanding how to read the chart is crucial for selecting the right shade. Here's a detailed breakdown: 1. Color Level (Numbering System) Ion's color levels are numbered from 1 (black) to 10 (lightest blonde). Each level corresponds to a specific lightness: - 1 – Black - 2 – Dark Brown - 3 – Brown - 4 – Dark Blonde - 5 – Medium Blonde - 6 – Light Blonde - 7 – Dark Blonde / Blonde - 8 – Blonde - 9 – Very Light Blonde - 10 – Lightest Blonde / Platinum Knowing the level helps in choosing a shade that matches your desired lightness or darkness. 2. Tone and Underlying Pigments The chart indicates the undertones that will emerge after coloring, such as: - Ash (A): Cool tones, reduces warmth, ideal for neutralizing brassiness. - Gold (G): Warm, yellowish tones that add vibrancy. - Copper (C): Rich, reddish-orange hues. - Beige (B): Neutral tones that balance warm and cool. - Natural (N): Balanced shades with minimal undertones. Understanding these helps in predicting how the color will look once applied and how it will fade over time. 3. Color Families The chart segments shades into categories: - Blondes: From icy platinum to warm honey. - Brunettes: Ranging from deep espresso to chestnut. - Red Shades: From subtle copper to vibrant fire. - Fashion Colors: Unconventional shades like pastel pinks, blues, or purples. 4. Using the Ion Hair Color Chart for Optimal Results

Leveraging the chart effectively involves a few essential steps: 1. Assess Your Starting Hair Color - Determine your current hair level and undertones. - Identify if your hair is pre-lightened or natural. - Consider any previous color treatments and their impact. 2. Define Your Desired Result - Decide if you want a subtle change or a drastic transformation. - Choose the appropriate level and tone on the chart. - Keep in mind that darker shades are easier to achieve from lighter hair than vice versa. 3. Match Shades to Your Hair Type - For cool undertones,

select ash shades. - For warm tones, opt for gold or copper shades. - For neutral or balanced results, pick natural or beige tones. 4. Select the Correct Developer Ion recommends specific developers for different shades: - 20 Volume (6%): Standard lift, suitable for most color applications. - 30 Volume (9%): For significant lift or covering resistant gray. - 40 Volume (12%): For high lift blonding, used with caution. Choosing the right developer ensures proper processing, lift, and tone development. 5. Perform Strand Tests Always conduct a strand test to preview how the color will develop on your hair. This step is vital, especially when working with new shades or drastic color changes.
