Understanding Isosceles and Equilateral Triangles

Before delving into the specifics of worksheets, it is important to understand what defines an isosceles and an equilateral triangle.

What Is an Isosceles Triangle?

An isosceles triangle is a triangle that has at least two sides of equal length. These equal sides are called legs, and the third side is called the base. The angles opposite the equal sides are also equal, which is a key property of isosceles triangles. Key properties of isosceles triangles: - Two sides are equal in length. - The angles opposite these sides are equal. - The line of symmetry passes through the vertex angle (the angle between the two equal sides) and bisects the base.

What Is an Equilateral Triangle?

An equilateral triangle is a special type of isosceles triangle where all three sides are equal in length. Consequently, all three interior angles are also equal, each measuring 60 degrees. Key properties of equilateral triangles: - All sides are of equal length. - All angles are equal, each measuring 60 degrees. - The triangle has three lines of symmetry. - It is a regular polygon.

2. Answer: Isosceles

Property Application

1. Question: In an isosceles triangle, the base angles are 45° . What is the measure of the vertex angle?
2. Solution: Since the sum of angles in a triangle is 180° , and the two base angles are equal,

$$\text{Vertex angle} = 180^\circ - 2 \times 45^\circ = 90^\circ$$

Calculations

1. Question: An equilateral triangle has a side length of 6 cm. What is its area?
2. Solution:

$$\text{Area} = (\sqrt{3}/4) \times \text{side}^2 = (\sqrt{3}/4) \times 36 = 9\sqrt{3} \text{ cm}^2$$

Construction

1. Instruction: Using a compass and straightedge, construct an equilateral triangle with side length 7 cm.

Word Problem

1. Question: A triangle has two sides measuring 10 cm and 10 cm, and the included angle between them is 60° . Find the length of the third side.
2. Solution: Use the Law of Cosines:

$$c^2 = a^2 + b^2 - 2ab \cos C$$

$$c^2 = 10^2 + 10^2 - 2 \times 10 \times 10 \times \cos 60^\circ = 100 + 100 - 200 \times 0.5 = 200 - 100 = 100$$

$$c = \sqrt{100} = 10 \text{ cm}$$
