Step 3: Liquefaction and Storage - The high-pressure liquid passes through a receiver. - It is stored temporarily before expansion. Step 4: Expansion - The liquid refrigerant passes through an expansion valve. - Pressure drops, and part of the liquid vaporizes, creating a cold mixture. Step 5: Evaporation - The cold mixture enters the evaporator. - It absorbs heat from the cooled space, vaporizing entirely. - The low-pressure vapor returns to the compressor, completing the cycle.
