Sample Topics and Sample Questions with Answers

Below are examples from typical International Lower Secondary Science 2 Workbook questions, illustrating how answers are structured and how learners can deepen their understanding.

Biology: Human Circulatory System

Question:

Describe the function of the heart in the circulatory system.

Sample Answer:

The heart is a muscular organ that pumps blood throughout the body. It maintains blood circulation, delivering oxygen and nutrients to tissues and removing waste products like carbon dioxide. The heart has four chambers—two atria and two ventricles—that work together to ensure continuous blood flow.

Learning Tip:

Note the difference between pulmonary and systemic circulation, and understand how the heart's chambers coordinate during each cycle.

Physics: Force and Motion

Question:

Explain why an object accelerates when a force is applied to it.

Sample Answer:

According to Newton's Second Law of Motion, an object accelerates when a net force is applied because the force causes a change in the object's velocity. The acceleration is directly proportional to the applied force and inversely proportional to its mass ($F = ma$).

Learning Tip:

Practice calculating acceleration with different forces and masses to strengthen your understanding.

Chemistry: Elements and Compounds

Question:

Differentiate between an element and a compound.

Sample Answer:

An element is a pure substance made up of only one type of atom, such as oxygen (O_2) or gold (Au). A compound is a substance formed when two or more different elements chemically combine, like water (H_2O) or carbon dioxide (CO_2). Elements cannot be broken down further by chemical means, whereas compounds can be broken down into elements through chemical reactions.

Learning Tip:

Use diagrams or models to visualize how elements combine to form compounds.
