2. Use algebraic manipulations, geometric constructions, or combinatorial reasoning.

Sample Problems and Their Analysis

Let's analyze some representative problems typical for Volume 1 of Math Olympiad Contest Problems for Elementary and Middle Schools.

Problem 1: Number Pattern

Problem: Find all two-digit numbers such that the sum of the number and its reverse equals 121.

Analysis:

1. Let the tens digit be t and the units digit be u .
2. The number is $10t + u$.
3. Its reverse is $10u + t$.
4. The sum is:

$$(10t + u) + (10u + t) = 121$$

Simplify:

$$11t + 11u = 121$$

$$11(t + u) = 121$$

$$t + u = 11$$

1. Since t is a digit from 1 to 9 (for a two-digit number) and u from 0 to 9, find all pairs where $t + u = 11$.

1. Possible pairs:

(2,9), (3,8), (4,7), (5,6), (6,5), (7,4), (8,3), (9,2)

1. Corresponding numbers: 29, 38, 47, 56, 65, 74, 83, 92

Key takeaway: Recognize symmetry and set up equations to solve pattern-based problems.

Problem 2: Geometry and Symmetry

Problem: In triangle ABC, point D lies on side BC such that AD is perpendicular to BC. If $AB = AC$, prove that D is the midpoint of BC.

Analysis:

1. Since $AB = AC$, triangle ABC is isosceles with A at the top.
2. Drop a perpendicular from A to BC, meeting BC at D.
3. In an isosceles triangle, the altitude from the apex A to the base BC also bisects BC.

Solution sketch:

1. Use properties of isosceles triangles and perpendicular bisectors.
2. Show that since AD is perpendicular to BC and ABC is isosceles, D must be equidistant from B and C, hence the midpoint.

Key insight: Recognize symmetry in the figure and apply properties of isosceles triangles.

Problem 3: Counting and Combinatorics

Problem: How many different three-digit numbers can be formed using the digits 1, 2, 3, 4, and 5 if no digit is repeated?

Analysis:

1. The hundreds place: 5 options (1-5).
2. The tens place: 4 options remaining.
3. The units place: 3 options remaining.

Total possibilities: $5 \times 4 \times 3 = 60$.

Note: Emphasize the importance of systematic counting and permutation principles.

Developing Problem-Solving Fluency

Practicing a variety of problems enhances flexibility and confidence. Here are key recommendations:

1. Solve daily: Regular practice with diverse problems.
2. Review solutions: Understand different approaches.
3. Create your own problems: Develop an intuitive sense of what makes a problem interesting or challenging.
4. Work with peers: Collaborative problem-solving fosters new ideas.
