What Is a Dichotomous Keys Gizmo?

Definition of a Dichotomous Key

A dichotomous key is a step-by-step tool used for identifying organisms or objects based on a series of choices that lead the user to the correct identification. These choices are usually presented as paired statements or questions, each describing contrasting characteristics.

Introduction to the Gizmo Version

The **dichotomous keys gizmo** is an interactive, digital version of traditional dichotomous keys. It is designed to simulate the process of identification in a virtual environment, often through educational websites or software applications.
