Core Concepts in Learning and Behavior Definitions and Foundations At its core, learning is defined as a relatively permanent change in behavior resulting from experience. Chance emphasizes that behavior is influenced not only by internal states but also by external environmental stimuli and contingencies.

Types of Learning The book categorizes learning into several key types:

- **Associative Learning:** The formation of associations between stimuli and responses.
- **Non-associative Learning:** Changes in response strength resulting from repeated exposure to a stimulus, such as habituation and sensitization.
- **Observational Learning:** Acquiring new behaviors by watching others.
- **Operant and Classical Conditioning:** The two primary mechanisms through which behaviors are learned.

Classical Conditioning: Principles and Processes Pavlovian Foundations Classical conditioning, pioneered by Ivan Pavlov, involves learning to associate a neutral stimulus with an unconditioned stimulus to produce a conditioned response.

Key Processes

- **Acquisition:** The initial learning phase where the association is formed.
- **Extinction:** The weakening of the conditioned response when the CS is repeatedly presented without the US.
- **Spontaneous Recovery:** The reappearance of a conditioned response after extinction.
- **Generalization and Discrimination:** The tendency to respond similarly to stimuli resembling the CS or to distinguish between different stimuli.

Applications of Classical Conditioning Chance discusses practical applications such as:

- Treatment of phobias through systematic desensitization.
- Advertising strategies using conditioned emotional responses.
- Understanding drug addiction and relapse.

Operant Conditioning: Principles and Applications Skinner's Contributions Operant conditioning, developed by B.F. Skinner, involves learning through

consequences—reinforcements and punishments. Fundamental Concepts - Reinforcement: Increases the likelihood of a behavior. - Positive Reinforcement: Adding a pleasant stimulus. - Negative Reinforcement: Removing an unpleasant stimulus. - Punishment: Decreases the likelihood of a behavior. - Positive Punishment: Adding an unpleasant stimulus. - Negative Punishment: Removing a pleasant stimulus. Schedules of Reinforcement Chance explores how different reinforcement schedules affect behavior: - Continuous Reinforcement: Reinforcing every occurrence. - Partial Reinforcement: Reinforcing only some instances, leading to greater resistance to extinction. - Types include fixed-ratio, variable-ratio, fixed-interval, and variable-interval schedules.
