Step-by-Step Genesis Order Walkthrough

The process of placing and managing orders in Genesis Order can be broken down into distinct phases:

1. Setting Up Your Environment

Before engaging with Genesis Order, ensure you have:

- A compatible blockchain wallet (e.g., MetaMask, Ledger).
- Access to the Genesis Order interface or API endpoints.
- Sufficient funds and gas fees for transaction submission.
- Familiarity with the specific blockchain network (Ethereum, Binance Smart Chain, etc.).

Tips for setup:

- Connect your wallet securely and verify network settings.
- Obtain API keys if accessing via third-party integrations.
- Review the latest documentation for version updates and feature toggles.

2. Creating an Order

Order creation involves specifying parameters that define your trading intent:

- Asset Pair: e.g., ETH/USDT.
- Order Type: Market, limit, stop-loss, or advanced types.
- Quantity: How much of the asset you want to buy or sell.
- Price: Applicable for limit orders; the target price.
- Expiration: Optional time frame after which the order is canceled.
- Additional Conditions: Post-only, IOC (Immediate or Cancel), FOK (Fill or Kill), etc.

Process:

- Access the order creation interface.
- Fill in required fields with accurate data.
- Sign the order with your wallet's private key, creating a cryptographic signature.
- Submit the signed order to Genesis Order via API or UI.

Security note: Always verify order details before signing to prevent errors or malicious modifications.

3. Order Validation & Submission

Once an order is submitted, Genesis Order performs:

- Validation: Checks signature authenticity, parameter correctness, and compliance rules.
- Broadcasting: The order is propagated to the order book module.
- Enqueueing: The order becomes active and visible to the matcher. This process ensures that only legitimate, properly formatted orders are entered into the system.

4. Order Matching & Execution

The matcher scans active orders to identify compatible pairs based on:

- Price and quantity.
- Order type constraints.
- Time priority (FIFO).
- Special conditions (e.g., IOC).

Matching process:

- When a match is identified, the system creates a trade record.
- Both parties receive notifications about the trade details.
- The settlement module initiates asset transfers.

Handling partial fills:

- If only part of an order can be matched, the remaining quantity stays active.
- The system updates the order's status accordingly.

5. Managing Orders Post-Execution

After execution, users can:

- View transaction history and detailed trade records.
- Modify open orders: Adjust prices, quantities, or conditions.
- Cancel open orders if market conditions change.

Order modifications also require cryptographic signatures to authorize changes, ensuring security.

6. Settlement & Finalization

Post-trade, Genesis Order's settlement layer confirms:

- Asset transfers on the blockchain.
- Deduction of applicable fees.
- Updating the order book and trade history.

Once settled, assets are available in the respective wallets, and the user can monitor their balance and trading positions.
