What is a Time Series?

A time series is a sequence of data points collected or recorded at successive points in time, often at uniform intervals. Time series data is prevalent across numerous disciplines, including finance (stock prices), economics (GDP, unemployment rates), environmental science (temperature readings), and engineering (sensor data).

Characteristics of Time Series Data

1. **Trend:** The long-term progression or movement in the data over time.
2. **Seasonality:** Regular, periodic fluctuations that occur at specific intervals (e.g., monthly, quarterly).
3. **Cyclicity:** Fluctuations that are not of fixed period, often associated with economic or business cycles.
4. **Irregularity:** Random or residual variations not explained by the other components.

Understanding these components helps in modeling and forecasting future data points effectively.
