Overview of York HVAC Model Number Structure York's model numbers typically consist of a combination of letters and numbers arranged in a specific sequence. While

some model numbers may vary slightly depending on the product line or year of manufacture, most follow a structured pattern designed to deliver maximum information in a compact format. General Format and Pattern A typical York HVAC model number looks like: YXX-XXXXXX Where: - Y: Brand identifier (often omitted or embedded within other codes) - XX: Series or product line code - -: Separator - XXXXXX: Numeric and alphabetic sequence detailing specific features such as capacity, efficiency, and configuration For example: YXE 036 M12 might be a model number for a specific air conditioner or heat pump.

### Breaking Down the Model Number Components

Let's explore the core elements that comprise a typical York model number:

- Series or Product Line Code** This segment indicates the general category or series of the unit, reflecting its technological features or target application.
  - Examples: - YXE: A common code for residential air conditioners and heat pumps. - YHPE: Denotes a high-efficiency heat pump series. - YLT: Represents a specific line of packaged units.
- Understanding the Series Code:**
  - Reflects the design features and technological advancements.
  - Helps distinguish between basic, mid-range, and premium units.
  - Guides compatibility with accessories or control systems.
- Capacity Indicators** Capacity is a crucial aspect, often expressed in tons or kilowatts (kW). York encodes this within the numeric part of the model.
  - For example: - 036 might indicate a 3-ton unit (since 1 ton = 12,000 BTU/hr, and 036 can represent 36,000 BTU/hr). - 048 could signify a 4-ton capacity.
- How to interpret capacity codes:**
  - Usually a three-digit number.
  - Divided by 12 to get the tonnage: -  $036 \div 12 = 3$  tons -  $048 \div 12 = 4$  tons
- This quick decoding allows users to identify the size of the system at a glance.
- Efficiency & Performance Codes** Efficiency ratings are often embedded within the model number, typically through alphabetic codes or additional numeric digits.
  - Common indicators include: - M: Mid-efficiency models - H: High-efficiency models - L: Low-efficiency or economy models
- Some models include SEER (Seasonal Energy Efficiency Ratio) or HSPF (Heating Seasonal Performance Factor) ratings directly within the code, especially in recent units.
- Additional Features & Configurations** The remaining characters often specify specific features such as:
  - Refrigerant type: e.g., R-410A (coded in some models)
  - Voltage or phase: e.g., 208/230V, 3-phase units
  - Special options: such as compressor type, control options, or coil configurations
- Examples: - M12: Might denote a mid-efficiency unit with a 12 SEER rating. - P8: Could indicate a packaged unit with certain features.

### Decoding a Complete Example
